

# Safespace Voyager®

The Safespace Voyager is a free-standing sleeping area for people who would be unsafe in an ordinary bed or travel cot. It is designed for short term use only e.g. holidays and respite care. It has been specifically designed for use by children with autism, epilepsy or challenging behaviour.

The Voyager's tough PVC netting 'tent' is supported by a robust yet lightweight aluminium frame and has several fun viewing panels to enable carers to see in. The Voyager is supplied with an inflatable mattress which fits snugly in the bottom.

It packs up into  
2 transportable bags

Our main product is the Safespace, designed for people with autism, epilepsy, challenging behaviours, and for anyone not safe in an ordinary room. They are semi-permanent installations that can fill a whole room, as a safer bedroom, playroom, calming or sensory area. Please see our website or brochure for more details. [www.safespaces.co.uk/safespaces](http://www.safespaces.co.uk/safespaces)

From the Safespace the Voyager was developed as a transportable sleeping area for occasional use only. It works in the same way as a Safespace in that it provides a low stimulation environment, with soft sides that flex outwards on impact, preventing the person hurting themselves on hard surfaces outside. It has an integral roof with standing height inside so is suitable for those with full or limited mobility.

The Voyager has made holidays and respite possible for the first time for some families who otherwise simply cannot manage their child away from home overnight, a child or client who would otherwise climb out of a travel cot or ordinary bed.

“

### Ben's Mum and Dad

We have just had a fantastic few days in Devon and tried out the Voyager for the first time. It was a great success as Ben accepted it (it has the same feel/smell as his Safespace) and although he didn't sleep anymore than normal he was safely contained and less noisy! We are very happy and can't wait to try it in our caravan. This product has given us a lot of hope. Thank you for everything you do at Safespaces, these products really are life changing for families like ours. I can't imagine going back to our pre-Safespace days!

It is supplied with complete assembly instructions, on paper and dvd, and with practice, can be put up in 10 minutes.

The Voyager is built around a strong but lightweight aluminium frame that can be packed away and carried. In order to maximise stability it has a system of water filled ballast bags that are added to the corners. Four are supplied.

Rarely is more than one bag on each corner needed. Additional bags are available to order that can be added to increase stability if necessary.

The Voyager packs up into 2 transportable carry bags which can be carried by car or plane.

“

### David's Dad

We have just returned from holiday in Florida and used the Voyager for the first time. What can we say! To be able to place our son in a safe and secure environment, and to know that he is both happy (he loved it!) and safe was an absolute godsend, and made the holiday stress-free and highly enjoyable. We can't thank you enough and will be spreading the word about your company and your wonderful products. Many thanks for lifting a heavy burden from our shoulders with such a simple yet life-changing piece of equipment.

## MORE INFORMATION

Please see our website for further information including more photos and Carer's Reviews. [www.safespaces.co.uk/voyager](http://www.safespaces.co.uk/voyager)

## TO ORDER A VOYAGER

Please contact us to discuss your individual requirements.
